

**The history of subsistence and commercial fisheries, stock assessment and enhancement activities, and watershed disturbances in the Klawock Lake drainage on Prince of Wales Island, 2000**

**Abstract:** The Klawock Lake Sockeye Salmon (*Oncorhynchus nerka*) Subsistence Project (Study Number FIS00-043) was initiated in 2000. This project was implemented because of concerns about the apparent declines in sockeye salmon returning to Klawock Lake. This report summarizes historical information about the Klawock Lake watershed including a history of the subsistence and commercial fisheries, hatchery enhancement activities, sockeye and coho salmon stock and to help identify potential limiting factors in sockeye salmon production. Any limiting factors identified by this project will provide direction to begin rebuilding the Klawock Lake sockeye stocks as funding becomes available.
